

Type 01b · PFA-lined Globe Control Valve

Single-seated globe valve · DIN and ANSI version

Application

PFA-lined control valve for corrosive media, especially suitable for high requirements in chemical plants and other industries.

- Valve size DN 15 to 150 ¹⁾ /NPS ½ to 6 ¹⁾
- Pressure rating PN 10 and 16/Class 150
- Temperatures -10 to +200 °C

The control valve consists of a single-seated globe valve with PFA lining and either a pneumatic actuator or hand-operated actuator. The valve is designed according to the modular-assembly principle and has the following features:

- Valve body of EN-JS 1049/A395 as standard, with 3-5 mm thick PFA lining
- Exchangeable PTFE/TFM seat and PTFE plug
- Stem sealed by a PTFE bellows and a backup, spring-loaded PTFE V-ring packing
- Test connection for monitoring
- Exchangeable actuator
- Additional equipment and mounting parts available according to IEC 60534 and NAMUR recommendations
- Face-to-face dimensions for DIN version according to DIN EN 558, Series 1
- Face-to-face dimensions for ANSI version according to DIN EN 558, Series 37

¹⁾ DN 15/NPS ½ and DN 150/NPS 6 available on request

Versions

The Type 01b Globe Valve is available optionally in the following versions:

- With SAMSON pneumatic actuator
- With SAMSON hand-operated actuator
- With actuators of other manufacturers on request

Special versions

- Lining made of conductive PFA
- Lining for -40 °C
- Flange with groove
- SSB bellows for special applications
- We recommend our Type 1a Control Valves to meet special requirements

24	Nut
25	Yoke
26	Slotted nut

Principle of operation

The process medium flows through the Type 01b Control Valve in the flow-to-open direction. The valve plug position determines the cross-sectional area of flow between the plug (4) and seat (3).

The plug is connected over the stem (12) to the actuator stem.

The PTFE bellows (5) seals the area between the valve body (1) and stem (12).

The PTFE V-ring packing (15) is used as a backup stem sealing.

A test connection port (13) allows the bellows to be monitored for leakage, e.g. by connecting a suction line or inert gas line.

The PTFE seat (3) is screwed into the valve body (1) using a suitable thread for plastic.

i Note

- In the event that cavitation may occur, we recommend the use of a guided plug for differential pressures above 3 bar or differential pressure ratio $p_2 < \Delta p$.
- Lined control valves are not suitable for operation with cavitation.
- We recommend using our Type 01a Valve in applications with cavitation noise or flow velocities above 25 m/s in the vena contracta.

i Note

The maximum permissible outlet velocity is 3 m/s. Contact us if higher velocities occur.

i Note

Before using the valve in hazardous areas, check whether this is possible according to ATEX 2014/34/EU. Refer to the Operating Instructions ► BA01a.

Fail-safe position

Depending on how the pneumatic actuator is mounted onto the valve, the valve has two fail-safe positions which become effective when the air pressure in the actuator is relieved or when the supply air fails:

- **Control valve with fail-close actuator:**
Upon air failure, the valve is closed. The valve opens when the signal pressure increases, acting against the force of the springs.
- **Control valve with fail-open actuator:**
Upon air failure, the valve is opened. The valve closes when the signal pressure increases, acting against the force of the springs.

Additional equipment and mounting parts

The following accessories are optionally available for the valve separately or in combinations:

- Positioner
- Limit switches
- Solenoid valves
- Supply air pressure regulator/filter
- Pressure gauge mounting blocks
- Pneumatic volume booster

Other accessories possible according to specifications on request.

Pressure-temperature diagram

The range of application is determined by the pressure-temperature diagram. Process data and medium can affect the values in the diagram.

Fig. 4: Pressure-temperature diagram

Table 2: General technical data

Valve size	DN 15 to 150	NPS ½ to 6
Pressure rating	PN 10/16	PN 10/16 (flanges according to ANSI Class 150)
Temperature range	See pressure-temperature diagram	
Characteristic	Equal percentage/linear	
Leakage range	Leakage rate A acc. to DIN EN 12266-1, test P12 (leakage rate 1 BO according to DIN 3230 Part 3)	
Rangeability	20:1 (up to K_{VS} 0.1) · 50:1 (K_{VS} 0.25 and higher) · 30:1 (DN 80 and larger)	
End connections	DIN EN 1092-2, Form B	ANSI Class 150

Table 3: Material

Body	EN-JS 1049/A 395
Lining	Thick-walled PFA lining
Bonnet flange	EN-JS 1049/A395
Plug and seat	PTFE ¹⁾ , optionally special material
Bellows	PTFE, optionally special material
Packing	PTFE V-ring packing loaded by spring washers
Stem	Corrosion-resistant steel 1.4571
Coating	Two-component polyurethane coat, grey beige (RAL 1019)

¹⁾ Control insert made of tantalum or other metals for 2 mm seat diameter

P = Parabolic plug, T = V-port plug

¹⁾ Linear only

²⁾ Use parabolic plugs only up to K_{VS} 0.4. Otherwise, contact PFEIFFER.

Terms for control valve sizing

According to IEC 60534-2-1:

$$FL = 0.95 \quad xT = 0.75$$

Correction terms

For gases and vapors: $\Delta LG = 0$

For liquids: $\Delta LF = 0$

Selection and sizing of the control valve

1. Calculate the appropriate K_{VS} according to IEC 60534-2-1.
2. Select valve size and K_{VS} according to Table 6.
3. Determine the differential pressure and select the suitable actuator from Table 5a and 5b.
4. Check the application against the pressure-temperature diagram.
5. Select additional equipment.
